[Part 261.5 of the Code of Federal Regulations \(40 CFR Part 261.5\)](#)

and/or

[Environment, Health and Safety Online - Summary of Requirements for CESQGs](#)

Reviewed: 01/28/21

1. Purpose

The purpose of this program is to provide a safe and compliant process for the disposal of Hazardous Wastes at Lamar University. The program is designed to comply with Federal and State regulations for Hazardous Waste.

This program does not apply to the disposal of radioactive, infectious, or biological wastes. Compliance is critical and requires full cooperation from all University departments.

2. Hazardous Waste Regulation

In 1980 the Resource Conservation and Recovery Act (R.C.R.A.) was established and administered by the Environmental Protection Agency (EPA) (42 U.S.C.) Under this act the EPA has the responsibility for regulating hazardous chemical waste. R.C.R.A. established a 'cradle to the grave' hazardous chemical waste management requirement to protect the public health and environment from the improper disposal of chemical waste.

The Texas Commission on Environmental Quality (TCEQ) administers an equivalent to RCRA for the State of Texas under Industrial Solid Waste and Municipal Hazardous Waste Regulations (Texas Administrative Code Title 30 Part 1, chapter 335).

Lamar University is a "Very Small Quantity Generator" (VSQG) (EPA) or "Conditionally Exempt Small Quantity Generator" (CESQG) (TCEQ) of hazardous waste and must comply with State and Federal regulations on waste disposal to allow us to maintain this status. Conditionally Exempt Small Quantity Generators (CESQG) generate 100 kilograms or less per month of hazardous waste, or 1 kilogram or less per month of acutely hazardous waste. All quantities of acute hazardous waste are subject to full regulation under parts 262 through 268, and parts 270 and 124 of 40 CFR, and the notification requirements of section 3010 of RCRA.

Please note that if we exceed our quotas to maintain our VSQG status then the paperwork and forms required by all who produce or purchase chemicals will be expanded dramatically.

Lamar University is not allowed to treat or dispose of hazardous chemical waste other than by a licensed vendor. It is illegal to dispose of hazardous chemical waste by dilution, evaporation, or disposal in the sanitary/storm sewers or the local municipal landfill. Failure to comply with chemical waste regulations could result in large fines and penalties for the University. Individual generators/employees causing the violation may

be personally liable. Violations can range from improper labeling waste to intentional disposing of Hazardous Chemical Waste into the air, down the drains or in the trash.

A Waste generator is responsible ‘from the cradle to the grave’ and is always responsible for environmental damage; therefore the choice of a reliable disposal facility is very important. In Texas non-compliance violations can be civil, criminal, or administrative violations and penalties can range from up to \$25,000/day in fines to a fifteen year prison term for individuals.

3. Responsibilities

Lamar University’s Department of Environmental Health and Safety and Risk Management is responsible for:

- The administration of the Hazardous Waste Management Program at Lamar University.
- Ensuring that all chemical waste is properly packaged, labeled, logged before disposal
- Ensuring that all chemical waste is transported to a permitted off-site facility for storage, treatment and disposal.
- The collection, storage and transportation of all hazardous chemical waste for disposal.
- Provision of information and assistance to individual chemical waste generators
- Maintaining permanent records of movement of all Hazardous Chemical Waste on the campus.

Hazardous Waste Generators, such as researchers, professors, shop foreman, etc., are responsible for:

- Following the disposal procedures
- Assuring that their employees and research assistants are trained in proper disposal procedures
- Properly identifying the hazardous chemical waste
- Training the employees and students on the hazards of the chemicals and waste in their areas
- Developing Emergency Response Procedures for chemical spills.

4. Hazardous Waste Disposal Program

Hazardous Chemical Waste Determination

Material becomes a waste when it is no longer useful as determined by the 'owner' and shall be requested for disposal. If the material is to be disposed of, it shall be determined if this material is hazardous or non-hazardous.

Hazardous wastes are those defined by the United States Occupational Safety and Health Administration (OSHA) as a substance for which there is a statistically significant evidence, based on at least one scientific study, showing that acute or chronic harm may result from exposure to that substance. This is regardless of whether the handling of the material is proper or improper.

Chemical waste can be made less hazardous by treatment to reduce the hazard or the quantity of waste in the laboratory if the treatment protocol is included in the experimental procedure.

A chemical waste is hazardous if it fits into one of the following categories:

a. Listed Waste:

A listed waste is one included in one of four lists, generated by the United States Environmental Protection Agency (EPA; TCEQ). Identified by the letters F, K, P, and U. Within the lists the materials are assigned hazardous waste numbers and hazard rating by the EPA. The ratings systems and the lists are provided in appendix 2.

The definitions for the list types are as follows:

(i) Type F wastes are generic categories of solvents and wastes and waste water from some specific processes.

(ii) Type K wastes are hazardous wastes from specific sources.

(iii) Type P wastes include acutely hazardous wastes.

(iv) Type U wastes are specific commercial chemical products, chemical intermediates and off-specification chemical products.

b. Characteristic Waste:

If a waste is not found to be one of the Listed Wastes it may be an "unknown" waste, which must be tested to determine the nature of the waste properties of the waste.

(iii) Reactivity (Waste #D003): Wastes which are unstable, release toxic gases, or undergo rapid or violent chemical reaction with water or other materials.

(iv) EP Toxicity (Waste #s D004-D017): Extracts of the material contain high concentrations of heavy metals and/or specific pesticides that could be released into ground water.

Appendix 2 contains the list of the contaminants and their maximum allowed concentrations to exempt from EPA Toxic designation.

Hazardous Waste Accumulation and Storage:

The University shall store all Hazardous Waste in a central temporary accumulation building.

This temporary storage facility complies with subpart DD of the 40 CFR Part 265.

The containment/storage building complies with 40 CFR 265.1101

The University has two storage units within the containment building.

The chemical containment/storage building is located adjacent to the Dept. of Chemistry and Biochemistry building facing the Sheila Humphrey Recreational area parking lot.

Inspection of the Temporary Accumulation unit

The accumulation units shall be inspected regularly by the Hazardous Waste Coordinator to look for any signs of corrosion, dents, bulges, cracks, or other signs of deterioration that could cause hazardous waste to be released.

The inspection shall be documented and retained for a period of one year.

The standard for containment building condition reporting (40 CFR Part 265.1101 (c) (3) shall be followed upon detection of a condition that could lead to or has caused a release of hazardous waste.

Emergency Preparedness and Prevention

The central accumulation area/building shall be maintained and operated to minimize the potential for the release of hazardous material to the environment. (Refer to 40 CFR Part 265.31)

The following applicable emergency equipment and procedures shall be maintained in the central accumulation building by Facilities Management and periodically tested to ensure it is in working order:

- Fire alarms
- Spill control equipment
- Decontamination equipment
- Automatic sprinklers
- A posted list of emergency contact numbers

All alarm systems and fire protection equipment shall be tested and maintained as necessary to assure its proper operation in the time of emergency by the Lamar University Facilities Management Department.

Waste containers shall be arranged in the central accumulation area so that there is adequate aisle space to allow access for emergency personnel and equipment.

Lamar University shall comply with the Preparedness and Prevention Standard 40 CFR Part 265.37 concerning emergency arrangements with local and state authorities.

Procedures for Hazardous Waste Removal (Off-site)

The Department of Risk Management shall require all contracted hazardous waste transporters to comply with the requirements

Nonhazardous waste:

Wastes that meet none of the criteria of hazardous wastes shall be considered as nonhazardous. Following certification of a waste as nonhazardous it may be treated as general garbage. It is important however that the waste be certified first.

Disposal of Nonhazardous Wastes:

The City of Beaumont does regulate what wastes may be disposed of in the public sewers. Some of these rules are more stringent than the criteria for classification of a waste as hazardous.

Based on these rules, nonhazardous wastes that meet the following properties may NOT be disposed of in the sewer lines.

- (i) Any fat, oil, grease, ash, cinder, sand, mud, shavings, metal, glass, tar or other solid or viscous liquid substance which may cause obstruction to the flow in sewer or other interferences with the proper operation of the wastewater treatment system.
- (ii) Any liquid or vapor having a flash point temperature higher than 650C (1500F).
- (iii) Any wastewater with a pH less than 6.0 or above 11.0 or having any corrosive property capable of causing damage or hazard to structures, equipment, or personnel of the wastewater treatment system.
- (iv) Any waste or water containing suspended or undissolved solids of such character that unusual attention or expense is required to handle such material.
- (v) Any water with objectionable odor or color.

Hazardous Waste labelling:

Original container labels shall be destroyed, defaced completely or preferably removed if used for chemical waste accumulation.

When the waste is first added the words "Unwanted Material" or "other equally effective wording that is used consistently" shall be added to the label until time for collection and a "**Hazardous Waste**" determination made.

Labelling Requirements:

EPA regulations require that waste containers be labelled with the chemical contents.

The label has to have enough information to make a 'Hazardous Waste' determination.

List all chemicals added including water. Lists can be continued on a separate label.

List the amounts of the contributions to the container. Include the EPA waste identification number of a waste if known.

Use full names of chemicals and compounds, NOT formula, abbreviations, or structures.

GHS labels for all these chemicals listed shall be added.

If a chemical waste contains a material with hard-to-find Safety Data Sheets (e.g. an obscure proprietary material), then the Waste Generator shall supply an SDS for the Hazardous Waste Coordinator.

When a container is determined to require collection by the Hazardous Waste Assistant then a request shall be made and a completion date added to the label.

The request for removal shall be by email, when containers are full or there is no expectation of any further wastes of the type in the container. This shall be within six months of the start of accumulation or within three days of the container being full if less than six months. (See section on Removal Procedures).

A file copy of the label used by the Hazardous Waste can be obtained from the Dept. of EHS & Risk Management Hazardous Waste Coordinator. Diagrams of these labels are shown in the "Labels" section. **Use of this label is encouraged.**

The labels can be printed on purpose made adhesive backed labels

On these labels;

The date is the date that accumulation is complete

The Waste Generator is the Principal Investigator or Research Faculty in charge of the lab that generated the waste.

Labels for containers of potentially explosive materials such as picric acid; silanes; nitro compounds and ethers shall indicate the percentage concentration of these chemicals.

Waste shall be removed from the site to the Waste handling area (room 114 in Chemistry building) by the Waste Handling Assistant. Waste from teaching laboratories shall be removed when all sections have completed the particular experiment that produces the waste. An exception to this exists where halogenated and non-halogenated organic solvent wastes produced in successive experiments are collected separately in larger containers. Such containers should be removed at the end of the semester.

Containers shall have a two inch headspace for bottles and four inch head space for drums.

Transport of waste shall be done following the rules for the transport of any chemical material in the Lamar University Chemical Hygiene Plan.

Mercury thermometers that are broken and their pieces may contain small amounts of mercury and shall be placed in a separate labeled, and closed container from other glass, this is considered hazardous waste, and shall be collected by the Hazardous Waste Assistant.

Clean glass wastes, particularly broken glass, shall be kept separate from the general garbage to avoid potential safety hazards to custodians. Specific glass containers shall be made available in each laboratory area for the disposal of glass waste. Workers shall wear goggles and appropriate gloves when disposing of this clean glass waste. **This waste is not collected by Dept. of Risk Management, it is the responsibility of the individual academic department.**

Needles, and needle-containing equipment (e.g. syringes with needles installed), are considered sharps waste, and thus medical waste. They must be disposed of in accordance with Texas regulation of health care facilities. In practice, this involves disposal via the University's sharps containers, which are then sent back to the sharps container supplier, which safely processes the waste. The Hazardous Waste Disposal Coordinator can supply further details.

Removal Procedures

- a. Once the container is ready for collection add the accumulation complete date and request collection by email from the Hazardous Waste Coordinator. The Coordinator needs to know the building and room number and shall generate an email response to the Hazardous Waste Assistant, copied to the generator. The Hazardous Waste Assistant shall arrange a fixed time to collect this waste with the generator and shall send this information by email, copied to the Coordinator.
- b. Containers with improper caps, leaks, surface contamination or improper labelling shall not be accepted.
- c. It is **illegal** to dispose of hazardous chemical in any of the following way:
 1. Disposal through the sanitary system
 2. Intentional evaporation in a fume hood.
 3. Disposal in the regular trash.

Transportation

A two level cart, with a three-inch lip on each level, shall be used to transport all hazardous waste from the laboratory/site to the temporary handling area. Freight elevators, where possible, shall be used to transport waste to the temporary accumulation area. Personnel shall not ride the elevators with these materials. Chemically incompatible materials shall be separated using the two levels on the cart.

Spill cleanup materials will be present on the cart at all times during pick-up of hazardous materials. Drip pads shall line each level of the cart to prevent any mixing of incompatible chemicals.

Transportation cart shall be labeled with hazard warning signs.

Personal Protection

Personal protective equipment shall be required during hazardous waste pickups. Safety personnel will determine the level of protection required to safely transport the materials.

Labels

File copies of these can be obtained from the Waste Coordinator.
 Chemical name/common name shall be written for all chemicals in the container.
 Chemical Formulae or abbreviations are not acceptable.
 This information can be found on the SDS along with the GHS information.

Emergency Procedures

All employees shall be informed of hazardous materials they might use or be exposed to at work. The program shall also include recorded training on handling spills and other emergencies. Safety Data Sheets are a source of this information and shall be maintained in a readily accessible area or database for all chemicals used or stored within a workplace. Special cleanup supplies shall be available and employees shall be trained on how to use these supplies.

Contaminated clothing, rags, absorbent materials, or other waste **from** cleanup of spills or leaks must be disposed of as hazardous waste.

All labs shall post emergency numbers to be

Emergency Spill Response Plan for laboratories

The University Risk Management Dept. shall reference the Hazardous Materials Emergency Response Plan for emergency spill procedures.

Training

The University Hazardous Waste Coordinator shall provide training to the laboratory Principal Investigator, Chemical Hygiene Officer, and anyone who handles hazardous waste in laboratories.

Each employee/student shall receive training on proper handling of chemicals and emergency response procedures.

authorizes the construction, installation, modification, or operation of a specified municipal hazardous waste or industrial solid waste storage, processing, or disposal facility in accordance with specified limitations.

Placard – Diamond shaped color coded signs placed on the outside of transporting vehicles indicating the hazards of the cargo.

Satellite Accumulation area –An area, system, or structure used for temporary accumulation of hazardous waste prior to transport to the central accumulation area.

Waste Handling Area – The area used to log in and prepare appropriate labels for material collected as Chemical Waste prior to moving into the Central Accumulation Area.

Appendix 2

EPA HAZARDOUS WASTE CODES

For up-to-date information, consult US CFR Title 40, Sub-parts C-E.

Code Waste description

Characteristic Hazardous Waste

D001 Ignitable waste-A solid exhibits the characteristic of ignitability if a representative sample of the waste has any of the following properties:

(1) It is a liquid, other than an aqueous solution containing less than 24 percent alcohol by volume and has a flash point less than 60°C(140°F) as determined by a Pensky-Martens Closed Cup Tester, using the test method specified in ASTM Standard D-93-79 or D-93-80, or a Setaflash Closed Cup Test tir

-01

sdaueIt

(4) It is an oxidizer as defined in 49 CFR Part 173.

D002 Corrosive waste-A solid waste exhibits the characteristic of corrosivity if a representative sample of the waste has either of the following properties:

(1) It is aqueous and has a pH less than or equal to 2, or greater than or equal to 12.5, as determined by a pH meter using either an EPA test method or an equivalent test method approved by the Administrator under the procedures set forth in 40 CFR Part 260.

(2) It is a liquid and corrodes steel (SAE 1020) AT A RATE GREATER THAN 6.35 MM (0.25 inch) per year at a test temperature of 55 C (130 F) as determined by the test method specified in NACE (National Association of Corrosion Engineers) Standard TM-01069 or an equivalent test method approved by the Administrator under the procedures set forth in 40 CFR Part 260.

D003 Reactive waste: A solid waste exhibits the characteristic of reactivity if a representative sample of the waste has any of the following properties:

(1) It is normally unstable and readily undergoes violent change without detonating.

(2) It reacts violently with water.

(3) It -forms potentially explosive mixtures with water.

(4) When mixed with water, it generates toxic gases, vapors or fumes in a quantity sufficient to present danger to human health or the environment.

(5) It is a cyanide or sulfide bearing waste which, when exposed to pH conditions between 2 and 12.5, can generate toxic gases, vapors or fumes in a quantity sufficient to present a danger to human health or the environment.

(6) It is capable of detonation or explosive decomposition or reaction at standard temperature and pressure.

(7) It is readily capable of detonation or explosive decomposition or reaction at standard temperature and pressure

(8) It is a forbidden explosive, a Class A explosive, or a Class B explosive as defined in 49 CFR Part 173.

EP Toxicity- A solid waste exhibits the characteristic of EP toxicity if, using the test methods described in 40 CFR Part 261 Appendix 11 (Toxicity Characteristic Leaching Procedure (TCLP) SW-846 Test Method 1311) or equivalent methods approved by the Administrator under the procedures set forth in 40 CFR Part 260, the extract from a representative sample of the waste contains any of the contaminants listed as D004 thru D017 at a concentration equal to or greater than the respective value given. Where the waste contains less than 0,5 percent filterable solids, the waste itself, after filtering, is considered to be the extract for the purposes of this section.

Waste Description, 2009

TABLE 1—MAXIMUM C

EPA HW No.¹	Contaminant	CAS No.²	Regulatory Level (mg/L)
D004	Arsenic	7440-38-2	5.0
D005	Barium	7440-39-3	100.0
D018	Benzene	71-43-2	0.5

§261.31 Hazardous wastes from non-specific sources.

(a) The following solid wastes are listed hazardous wastes from non-specific sources unless they are excluded under §§260.20 and 260.22 and listed in appendix IX.

Industry and EPA hazardous waste No.	Hazardous waste	Hazard code
Generic:		
F001	The following spent halogenated solvents used in degreasing: Tetrachloroethylene, trichloroethylene, methylene chloride, 1,1,1 trichloroethane, carbon tetrachloride, and chlorinated fluorocarbons; all spent solvent mixtures/blends used in degreasing containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures	(T)
F002	The following spent halogenated solvents: Tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1 trichloroethane, chlorobenzene, 1,1,2 trichloro 1,2,2 trifluoroethane, ortho dichlorobenzene, trichlorofluoromethane, and 1,1,2 trichloroethane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those listed in	(T)

	F001, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures	
--	---	--

F003 The following spent non halogenated solvents: Xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures/blends containing, before use, only the above spent non halogenated solvents; and all spent solvent mixtures/blends containing, before use, one or more of the above non halogenated solvents, and, a total of ten percent or more (by volume) of one or more of those solvents listed in F001, F002, F004, and F005; and still bottoms

the above spent solvents

F024 Process

F034 Wastewaters (except those that have not come into contact with process

I

F039 Leachate (liquids that have percolated through land disposed wastes) resulting (T)
from the disposal of more than one restricted waste classified as hazardous
under subpart D of this part. (Leachate resulting from the disposal of one or
more of the following EPA Hazardous Wastes and no other Hazardous Wastes
retains its EPA Hazardous Waste Number(s): F020, F021, F022, F026, F027,
and/or F028.)

P012 Arsenic trioxide
P038 Arsine, diethyl
P036 Arsenous dichloride, phenyl-
P054 Aziridine
P013 Barium cyanide
P024 Benzenamine, 4-chloro-
P077 Benzenamine, 4-nitro-
P028 Benzene, (chloromethyl)-
P042 1,2-Benzenediol, 4[1-hydroxy -2-(methylamino)ethyl]-
P046 Benzeneethanamine, alpha, alphasdimethyl-
P014 Benzenethiol
P001 2H-1-Benzopyran-2-one, 4-hydroxy-3-(3-oxo-1-phenylbutyl)-and salts
P028 Benzyl chloride
P015 Beryllium dust
P016 Bis(chloromethyl)ether
P017 Bromoacetone
P018 Brucine
P021 Calcium cyanide
P022 Carbon disulfide
P022 Carbon disulfide
P095 Carbonic dichloride
P023 Chloroacetaldehyde
P024 p-Chloroaniline
P029 Copper cyanide
P030 Cyanides (soluble cyanide salts), not otherwise specified
P031 Cyanogen
P033 Cyanogen chloride
P034 2-Cyclohexyl-4,6-dinitrophenol
P036 Dichlorophenylarsine
P037 Dieldrin
P038 Diethylarsine
P041 Diethyl-p-nitrophenyl phosphate
P040 O,O-Diethyl O-pyrazinylphosphorothioate
P043 Diisopropyl fluorophosphates (DEP)
P004 1,4,5,8-Dimethanonaphthalene, 1,2,3,4,10,10-hexachloro-1,4,4a,5,8,8a-hexahydro-(1-alpha, 4-alpha. 4a-beta, 5-alpha, 8-alpha, 8abeta)-

P060 Hexachlorohexahydro-exoexodemethanonaphthalene
P044 Dimethoate
P045 3,3-Dimethyl-1-(methylthio)- 2-butanone, O-[(methylamino)carbonyloxime
P046 alpha,alpha-Dimethylphenethylamine
P047 4,6-Dinitro-o-cresol and salts

P073 Nickel carbonyl
P073 Nicotine and salts
P076 Nitric oxide
P077 p-Nitroaniline
P078 Nitrogen dioxide
P076 Nitrogen oxide NO
P078 Nitrogen oxide NO₂
P081 Nitroglycerine
P082 N-Nitrosodimethylamine
P084 N-Nitrosomethylvinylamine
P074 Nickel cyanide
P085 Octamethylpyrophosphoramide
P087 Osmium oxide
P087 Osmium tetroxide
P088 7-Oxabicyclo[2.2.1]heptane-2,3-dicarboxylic acid
P089 Parathion
P034 Phenol, 2-cyclohexyl-4,6-dinitro-
P048 Phenol, 2,4-dinitro
P047 Phenol, 2-methyl-4,6-dinitro- and salts
P020 Phenol, 2-(1-methylpropyl)-4,6-dinitro-
P009 Phenol, 2,4,6-trinitro-, ammonium salt
P092 Phenylmercury acetate
P093 Phenylthiourea
P094 Phorate
P095 Phosgene
P096 Phosphine
P041 Phosphoric acid, diethyl 4-nitrophenylester
P039 Phosphorodithioic acid, O,O-diethyl S-[2-(ethylthio)ethyl] ester
P094 Phosphorodithioic acid, O,O-diethyl S-[(ethylthio)methyl] ester
P044 Phosphorodithioic acid, O,O-dimethyl S [2-(methylamino)-2-Oxoethyl]ester
P043 Phosphorofluoric acid, bis(methylethyl)-ester
P089 Phosphorothioic acid, O,O-diethyl-O-(4-nitrophenyl) ester
P040 Phosphorothioic acid, O,O-diethyl-O-pyrazinyl ester
P097 Phosphorothioic acid, O-[4-(dimethylamino)sulfonylphenyl] O,O-dimethyl ester
P071 Phosphorothioic acid, O,O-dimethyl O-(4-nitrophenyl) ester
P110 Plumbane, tetraethyl-
P098 Potassium cyanide
P099 Potassium silver cyanide
P070 Prop anal, 2-methyl-2-(methylthio)-O-[(methylamino)Carbonyl]oxime
P101 Propanenitrile
P027 Propanenitrile, 3-chloro
P069 Propanenitrile, 2-hydroxy-2methyl
P081 1,2,3-Propanetriol, trinitrate
P017 2-Propanone, 1-bromo-P102 Propargyl alcohol
P003 2-Propenal
P005 2-Propen-1-ol

P067 1,2-Propylenimine

U005 Acetamide, N-914-fluoren-2-yl
 U112 Acetic acid, ethyl ester
 U 144 Acetic acid, lead salt
 U214 Acetic acid, thallium (1+) salt
 U232 Acetic acid, (2,4,5-trichlorophenoxy)-
 U002 Acetone
 U003 Acetonitrile
 U004 Acetophenone
 U005 2-Acetylaminofluorene
 U006 Acetyl chloride
 U007 Acrylamide
 U008 Acrylic acid
 U009 Acrylonitrile
 U011 Amitrole
 U012 Aniline
 U014 Auramine
 U015 Azaserine
 U010 Azirino(2', 3':3,4) pyrrolo-[1,2-a]indole-4,7-dione, 6-amino-
 8[((aminocarbonyl)ocy)methyl]-1,la,2,8,8a,8b-hexahydro-8amethoxy-5-methyl-

 U157 Benz[j]aceanthrylene, 1,2-dihydro-3-methyl-
 U016 3,4-Benzacridine
 U017 Benzal chloride
 U192 Benzamide, 3,5-dichloro-N-(1,ldiethyl-2-propynyl)-
 U018 Benz[a]anthracene
 U094 Benz[a] anthracene, 7,12-d.imethyl-
 U012 Benzenamine
 U014 Benzenamine,4,4'-carbonimidoylbis(N,N-dimethyl-)
 U049 Benzenamine, 4-chloro-2-methyl-
 U093 Benzenamine,N,N-dimethyl-4-(phenylazo)-
 U328 Benzenamine, 2-methyl-
 U353 Benzenamine, 4-methyl-
 U158 Benzenamine, 4,4'-methylenebis(2-chloro-)
 U222 Benzenamine, 2-methyl-, hydrochloride
 U181 Benzenamine, 2-methyl-5-nitro
 U019 Benzene
 U038 Benzeneacetic acid, 4-chloroalpha-(4-chlorophenyl)-alpha-hydroxy,ethyl ester
 U030 Benzene, 1-bromo-4-phenoxy-
 U035 Benzenebutanoic acid,4-[bis(2-chloroethyl) amino]-
 U037 Benzene, chloro-
 U221 Benzenediamine. ar-methyl
 U028 1,2-Benzenedicarboxylic acid, bis(2-ethylhexy) ester
 U069 1,2-Benzenedicarboxylic acid, dibutylester
 U088 1,2-Benzenedicarboxylic acid, diethylester
 U102 1,2-Benzenedicarboxylic acid, dimethylester
 U107 1,2-Benzenedicarboxylic acid,di-n-octyl ester

U070 Benzene, 1,2-dichloro-
 U071 Benzene, 1,3-dichloro-
 U072 Benzene, 1,4-dichloro-
 U060 Benzene, 1,1'-(2,2-dichloroethylidene)bis[4-chloro-
 U017 Benzene, (dichloromethyl)-
 U223 Benzene, 1,3-diisocyanatomethyl-
 U239 Benzene, dimethyl-
 U201 1,3-Benzenediol
 U127 Benzene, hexachloro-
 U056 Benzene, hexahydro-
 U220 Benzene, methyl-
 U105 Benzene, 1-methyl-2,4-dinitro-

DEA Controlled Substances

Summary

Items identified by the US Department of Justice, Drug Enforcement Administration (DEA) and the Texas Department of Public Safety (DPS) as controlled substances are subject to licensing, registration, storage, security, use and disposal requirements. See a [list of DEA controlled substances](#).

Principal Investigators (PIs) using controlled substances in their laboratory research (including animal research) are subject to state and federal regulatory requirements.

Licensing and Registration

Since the University cannot, by law, maintain a campus wide registration for controlled substances, it is the responsibility of each PI to obtain appropriate licenses and registration, and to adhere to applicable state and federal regulatory requirements when working with controlled substances. PIs must register their controlled substance(s) with the federal DEA as well as the Texas DPS.

1. **State DPS Licensing:** Approved applicants will receive a one-year license to work with controlled substances in a manner consistent with the approved use(s) described in the application.
2. **Federal Registration:** Once you complete your state [DPS Registration](#), you will need to complete a [DEA Controlled Substance registration](#) application. DEA registrations remain active for a 1-year period.
3. **Notification:** Copies of all registration and licensing related correspondence must be kept by the PI and additional copies sent to Department of Risk Management.

The PI shall complete a Controlled Substances Self Evaluation annually. The forms, indicating corrective actions taken, should be kept by the PI for at least one year and a copy should be submitted to Department of Risk Management.

Storage and Security Controls

Controlled substances possessed, kept, or otherwise stored in a manner or location not in compliance with state or federal law are subject to seizure by and forfeiture to federal or state officials. Failure to comply with applicable requirements may also result in a suspension of

2. Use of Controlled Substances: A separate and current record for the storage and use of each controlled substance, indicating the date, laboratory building and room, specific research experiment, controlled substance's application in the research, and type, strength and quantity of each controlled substance use or disposal. By noting starting volume or mass of substance in the container, each use or disposal is a subtraction from the starting quantity, and the running (decreasing) amount should equal the total amount remaining on-hand. Each record of use must be signed by the person working with the controlled substance.
3. Inventory of Controlled Substances: A complete and accurate inventory of the stock of controlled substances within each registrant's laboratory must be performed initially. The type, strength, and quantity of all controlled substances must be recorded at this time. The person conducting the inventory must also date and sign the record. After the initial inventory is taken, a new inventory of all stocks of controlled substances on hand should be conducted at least every two years. PIs should be sure that the inventory can be reconciled to the records of receipt, use and disposal at all times.

Note: the guidance information above is not intended to cover all applicable parts of the DEA and DPS rules. For further information on the requirements for controlled substances review the DEA and DPS websites.
