He is a frequent speaker at management conferences and seminars. He is also a member of several professional organizations.

1. The first part of the paper discusses the general theory of the model. It starts with a review of the existing literature and then presents the main results. The second part of the paper is devoted to the numerical analysis of the model. It includes a description of the numerical scheme and a discussion of its stability and accuracy. The third part of the paper contains numerical results for various parameter values. The fourth part of the paper discusses the implications of the results and concludes with some final remarks.
